REVIEW1-PROJECT

System that uses Generative AI to analyse resumes against specific job descriptions.
It employs Few-Shot Prompting to guide a Large Languag

Your abstract is clear, well-structured, and hits every essential academic and technical beat: problem statement, methodology, technical implementation, core features, and business impact (including human-in-the-loop oversight).

Because your abstract defines very specific deliverables, every phrase in it translates directly into a concrete module or feature you will need to build and demonstrate during your project presentation:

Abstract-to-Implementation Map

Phrase in Your Abstract	What You Must Build in Code
"analyse resumes against specific job descriptions"	**Input Module:** A parser (e.g., `pdfplumber` or `python-docx`) to extract raw text from uploaded PDF/DOCX resumes, paired with a text input for the Job Description (JD).
"employs Few-Shot Prompting to guide an LLM through sample evaluations"	**Prompt Engineering Module:** A prompt template containing **2–3 calibrated examples** (e.g., a strong match, a partial/borderline match, and a weak match) showing how to weigh experience, skills, and role fit.
"Pydantic validation is integrated to ensure... predefined data struc... cor	**Schem alidation Layer:** A `BaseModel` class enforci trict types (`int` , `List[str]` , `Literal`) cores,
